

Interoperability

DoD/VA and Beyond

Ms. Lois Kellett
2008 Joint Venture Conference
March 4, 2008

Agenda

- Where We Are Now
 - Transfer of data
 - Viewable data
 - Computable data
 - Order portability
 - Image transfer
- Potential Joint DoD/VA Health IT Initiatives
- Wounded, Ill, and Injured Line of Action #4
- The Way Ahead
- Contact information

Point of Separation

The Federal Health Information Exchange (FHIE) supports the monthly, one-time transfer of electronic health information from DoD to VA at the point of a Service member's separation

*One-way,
Enterprise
exchange, Text
data*

Point of Separation (FHIE Data)

- Lab results
 - Radiology reports
 - Outpatient Rx data
 - Allergy information
 - Discharge summaries
 - Consult reports
 - Admission/Discharge/Transfer information
 - Standard Ambulatory Data Record elements
 - Demographic data
 - Pre-/Post-Deployment Health Assessments
 - Post-Deployment Health Reassessments
- 211 million messages
 - On 4.2 million retired or discharged Service members

Shared Patient Data

The Bidirectional Health Information Exchange (BHIE) enables real-time sharing of **viewable** electronic health information between DoD and VA for shared patients

*Two-way,
All DoD and VA sites,
Text data*

Shared Patients BHIE Data — Current

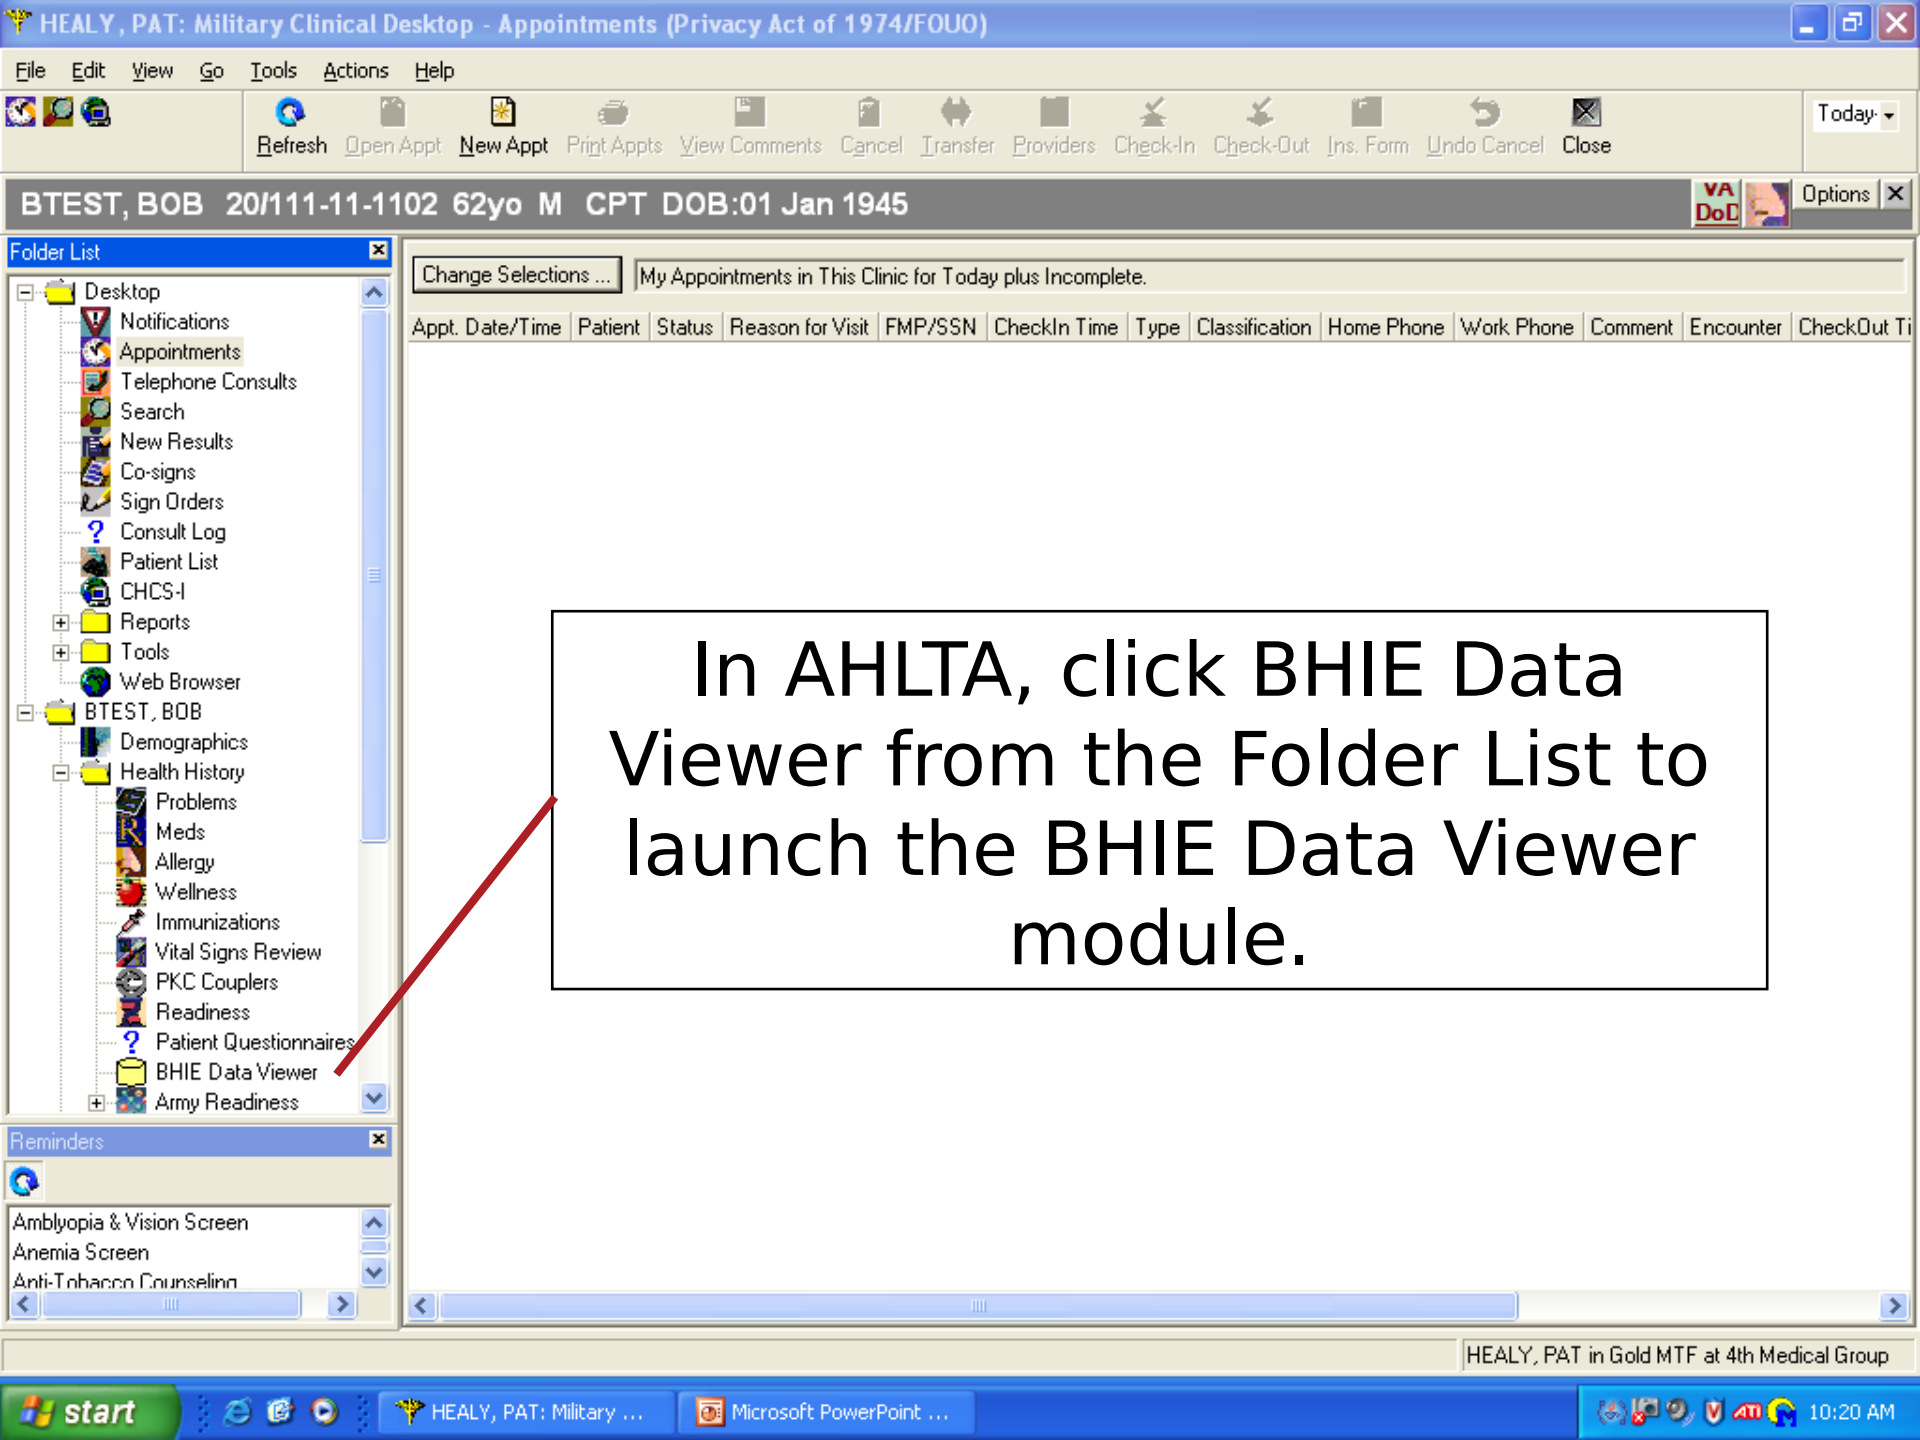

- Allergies
- Outpatient pharmacy
- Demographics
- Inpatient and outpatient lab results
- radiology reports
- Encounter notes
- Procedures
- Problem lists
- Discharge summaries
- Operative notes (MAMC/VA Puget Sound)
- Inpatient consultations (MAMC/VA Puget Sound)
- Theater clinical data

BHIE supports care for more than 2.9 million patients to date

DoD providers access VA data through AHLTA

VA providers access DoD data through VistA or VistA Web

In AHLTA, click BHIE Data Viewer from the Folder List to launch the BHIE Data Viewer module.

Recent Lab Results	Vitals	Appointments/Visits/Admissions
Glucose-Poc Blood W/c Lb #1466 Jan 23,06	T 102.2 F Jan 23,06 (39.0 C) P 88 Jan 23,06 R 19 Jan 23,06 BP 212/98 Jan 23,06 HT 66 in Jan 23,06 (167.6 cm) WT 175 lb Jan 23,06 (79.5 kg) PN 2 Jan 23,06	Jan 23,2006 10:00 Bassett Checked Out

Shared Patients (BHIE Data) — Planned

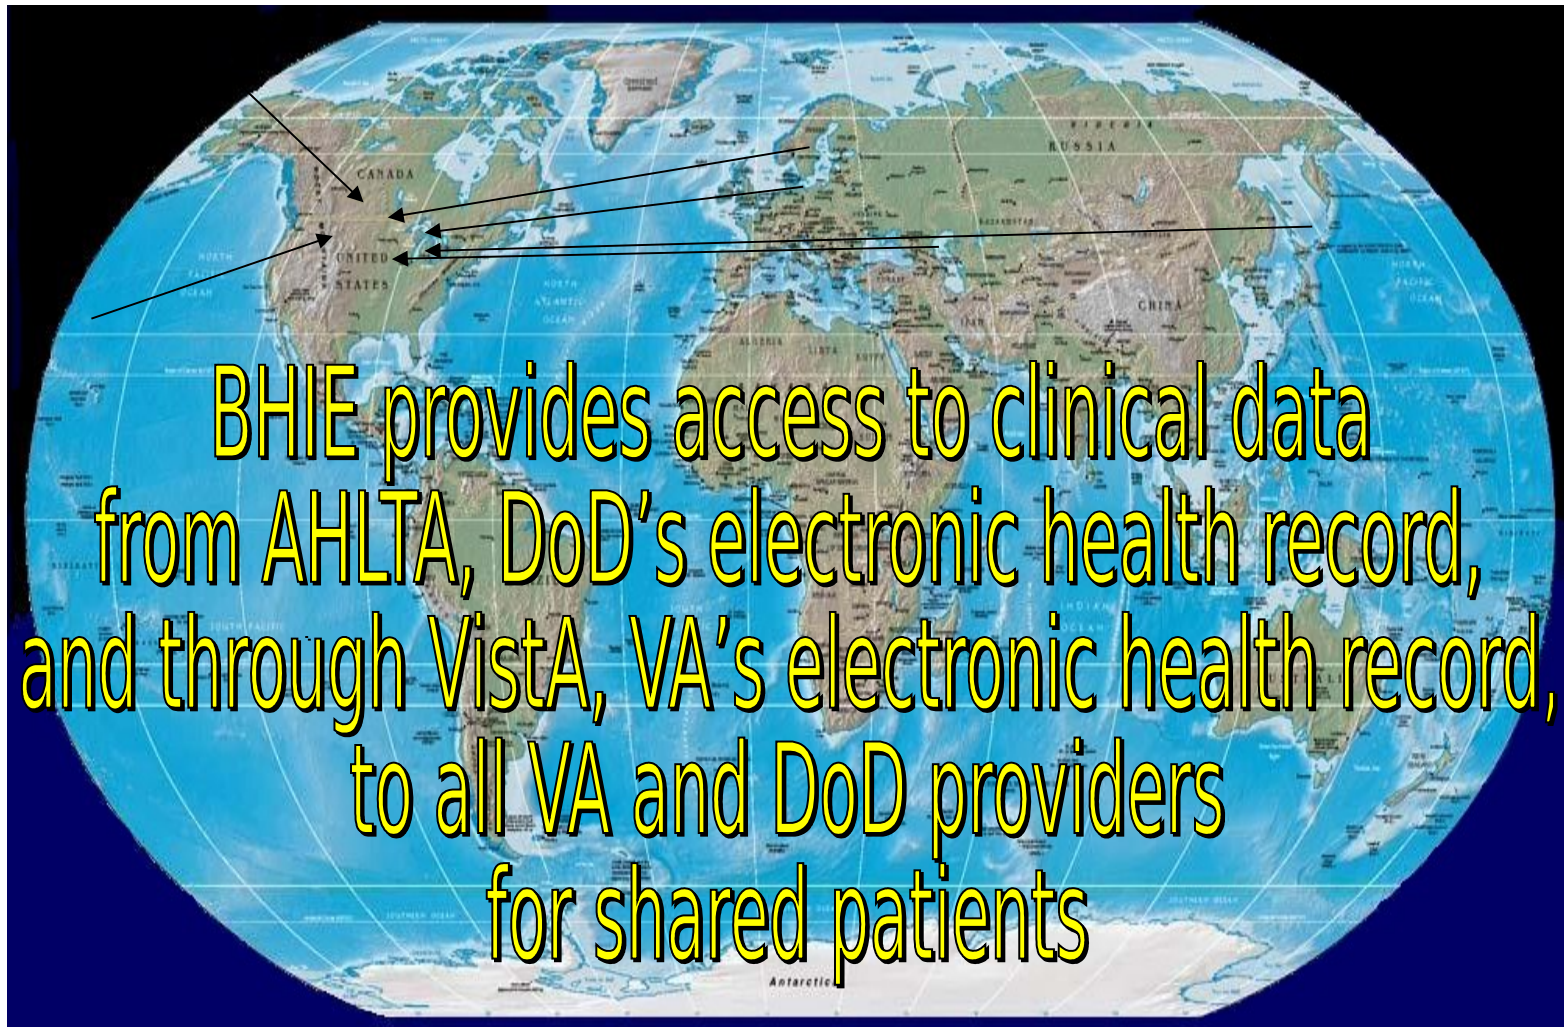

- Inpatient consults (3/08)
- Operative reports (3/08)
- Vital signs (6/08)
- Family history (9/08)
- Social history (9/08)
- Other history (9/08)
- Questionnaires and forms (9/08)

These data elements will be added to BHIE in 2008

BHIE Worldwide

Computable Data

The Clinical Data Repository/Health Data Repository (CHDR) supports interoperability between

DoD's Clinical Data Repository (CDR) &
VA's Health Data Repository (HDR)

*Two-way,
Enterprise exchange,
Computable data*

Computable Data (CHDR)

- Standardized, computable data
 - Outpatient pharmacy data
 - Medication allergies
- Current capability
 - Computable data supports real-time drug-drug and drug allergy checks using data from both DoD and VA
 - For patients set as active dual consumers (ADCs), data is seen everywhere CHDR is available
 - All DoD sites have the capability to set ADCs
- Future enhancements
 - Laboratory (chemistry and hematology) data
 - Automated activation of ADCs

Order Portability

The Laboratory Data Sharing Initiative (LDSI) supports bidirectional electronic order entry and results retrieval of chemistry laboratory tests with either DoD or VA acting as a reference lab for the other agency

Order Portability (LDSI)

-
- Available for use throughout DoD and VA
 - Used daily where one Department serves as a reference lab for the other
 - Addition of lab anatomic pathology (AP) and microbiology orders/results in FY 2007

Image Sharing

DoD and VA have adopted a phased approach to achieve an image sharing solution. The phased approach integrates multiple systems and leverages existing stakeholder initiatives to achieve this goal

Wounded Warrior Image Transfer

- Digital radiology images and scanned medical records for severely wounded warriors sent from DoD to VA when the decision is made to transfer the patient
- Data transfer initiated March 2007, additional sites added August 2007

Walter Reed Army Medical
Center

National Naval Medical Center

Brooke Army Medical Center

Tampa Polytrauma Center

Palo Alto Polytrauma Center

Minneapolis Polytrauma
Center

Richmond Polytrauma
Center

BHIE Imaging

-
- El Paso NDAA imaging demonstration project
 - Leverages BHIE infrastructure and expands it to accommodate images
 - Primary focus is for sharing radiology images between DoD and VA facilities in a specified geographic region
 - Provides lessons-learned and technology components for enterprise-wide image sharing
 - Future activities
 - Add other imaging modalities such as EEGs

JIF Imaging Project

-
- Enterprise-level Joint Incentive Fund project
 - Builds on VA's existing Vista Imaging capability and DoD's imaging enhancements to AHLTA
 - Sharing between AHLTA and VistA of:
 - Referential quality radiology images
 - Image import reconciliation
 - DoD/VA Image registry
 - To be deployed to initial sites in summer and fall of 2008
 - Further deployment pending lessons learned from initial deployment sites and funding

Theater Images

- Significant image sharing among theater medical facilities is ongoing
- Bandwidth constraints and labor-intensive manual processes impede ease of sharing
- Plan has been submitted to:
 - Provide increased bandwidth
 - Intra-theater
 - Theater to Landstuhl
 - Automate the linkage of patient demographic information with the image
 - Implement a storage/archive capability for theater images

Potential Joint DoD / VA Health IT Initiatives

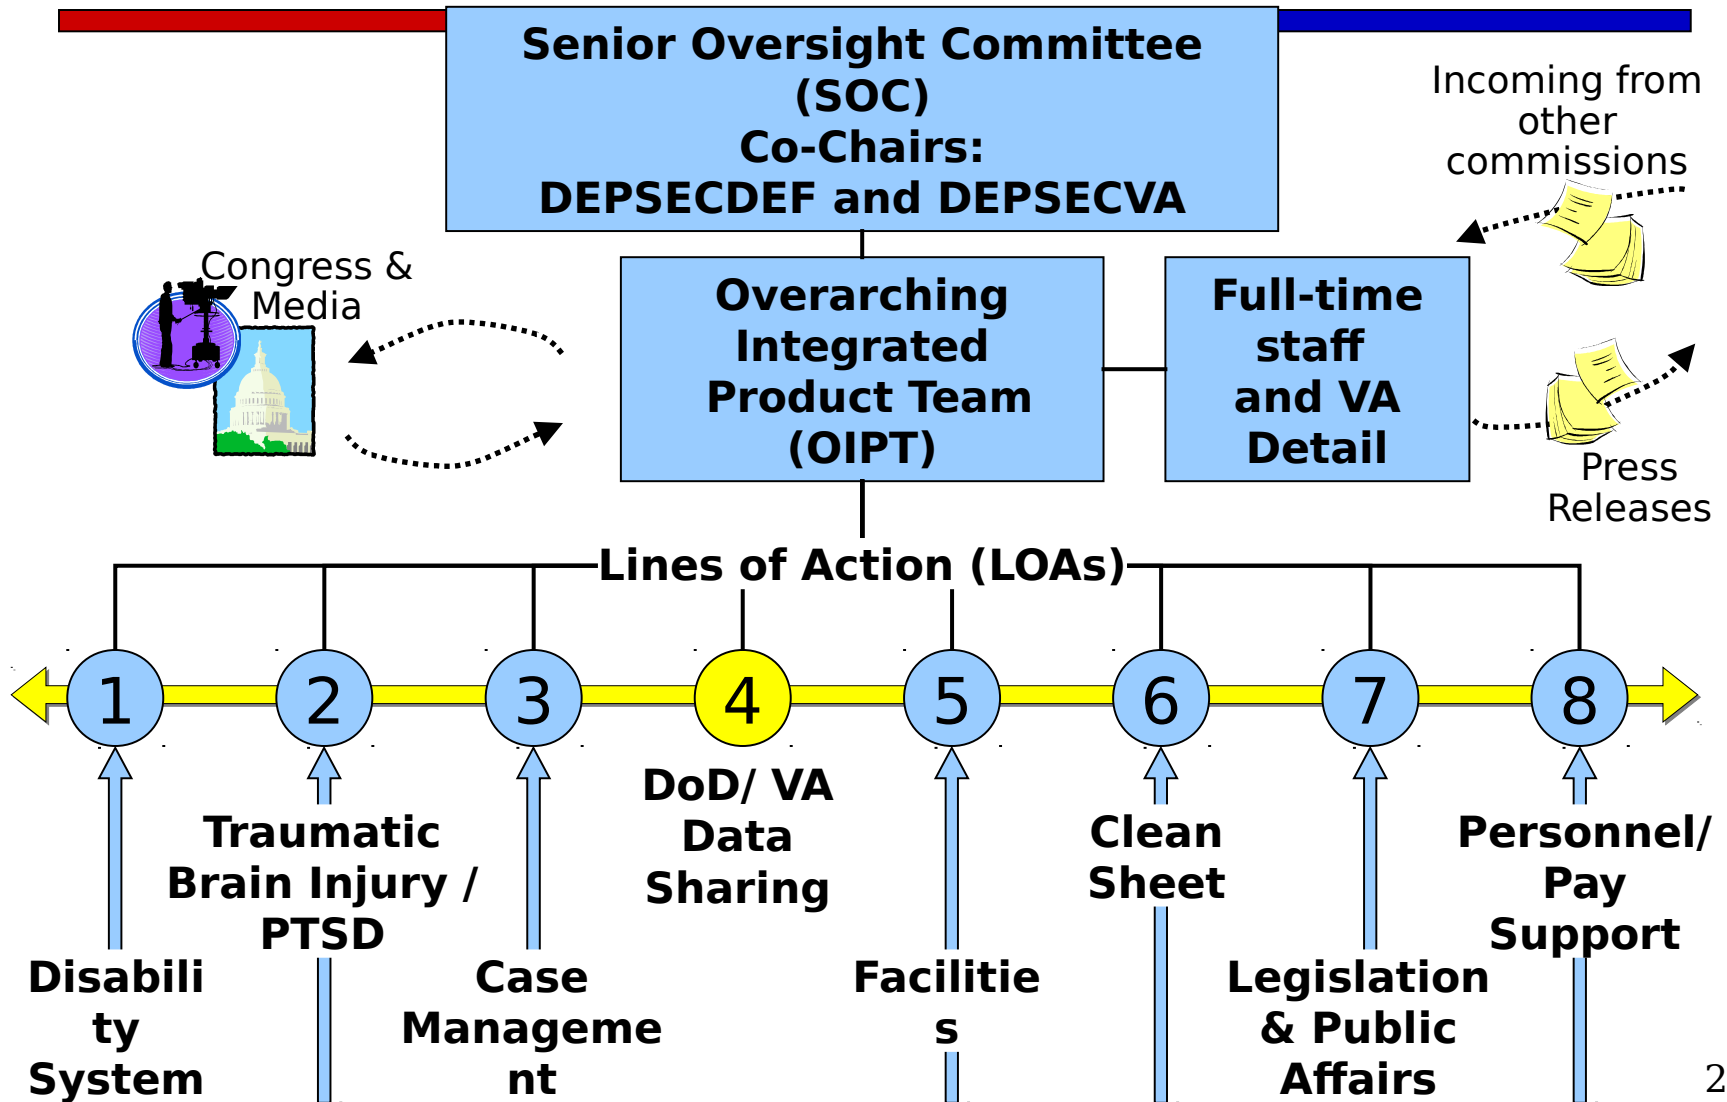

- Joint Inpatient Electronic Health Record
 - Similar requirements, unique opportunity
 - Good timing, potentially substantial benefits
 - Continuity of inpatient care
 - Cost savings from economies of scale
 - Ability to address requirements at joint medical facilities
- eBenefits Web Portal
 - Recommendation of Dole/Shalala commission (7/07)
 - “One-stop” for health and benefits information

SOC, OIPT, and LOAs

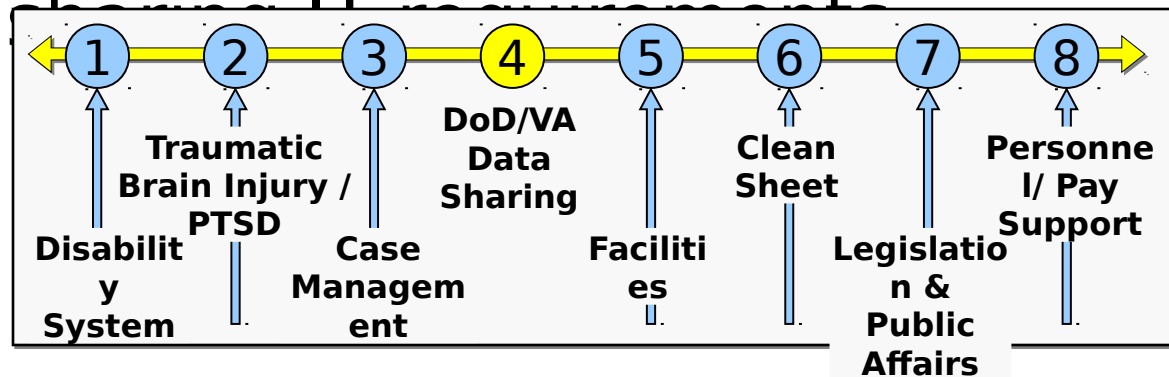

- Structure

Line of Action #4

- Ensure appropriate demographic, personnel, and medical information on Service members and Veterans is visible, accessible, and understandable through secure, interoperable information management systems
- Coordinate across other Lines of Action for data

IT Support for Lines of Action

DoD / VA information management and information technology groups have developed high-level requirements and rough order of magnitude cost

estimates for 18 capabilities.

The Way Ahead

- Coordinating across Lines of Action to provide IT support for Wounded Warrior initiatives
- Integrating health data sharing and personnel / administrative data sharing
- Expanding data sharing to include additional viewable and computable data elements
- Monitoring the evolving needs of returning Wounded Warriors
- Addressing recommendations of Wounded Warrior commissions and task forces and the DoD/VA Joint Clinical Information Board
